

3-day Space Weather Conditions (SUPARCO)

Friday, November 30, 2018, 15:12 PST

LOCAL CURRENT IONOSPHERIC CONDITIONS OVER PAKISTAN

DATE	30-Nov-18 (noon)	1-Dec-18 (noon)	2-Dec-18 (noon)
foF2	ISL/SON: 8/7 MHz	7/6 MHz	9/8 MHz
h'F2	ISL/SON: 235/243 km	250/260 km	260/255 km
MUF	ISL/SON: 29/25.8 MHz	26/21 MHz	29/26 MHz
TEC	ISL/SON: 18/20 TECU	14/16 TECU	16/18 TECU

Local ionospheric conditions are nominal with slightly depressed MUF conditions. It is advised to use a higher frequency band in case of HF communication difficulty.

LOCAL GEOMAGNETIC CONDITIONS OVER PAKISTAN

K-index	1	1	1
F	ISL/SON: 49842/45292 nT	49800±50 /45300±30 nT	49810±40/45300±40 nT
D	ISL/SON: 0.70/0.55 degrees	0.70/0.56 degrees	0.71/0.56 degrees

The local geomagnetic field is quiet at the moment.

SOLAR CONDITIONS

SN	0	2 (SSN-predicted)	2 (SSN-predicted)
F 10.7	67 sfu	68 sfu	68 sfu
V _{sw}	352 km/sec (varied in the past 12 hrs between 352 & 373 km/s)	Elevated solar wind expected	Moderate solar wind expected
Solar flares	A 1.6 (max. flare in the past 24 hrs: A 2.0 1043 UT Nov 29)	Very Low levels of solar flare activity expected	Very Low levels of solar flare activity expected
IMF Bt Bz	2.9 nT (varied in the past 12 hrs between 1.8 & 2.9 nT) +1.6 nT (varied in the past 12 hrs between -1.5 & +1.9 nT)	Expected to vary between positive and negative sectors.	Expected to vary between positive and negative sectors

Solar conditions are at very low levels with background X-ray flux at A-class levels. Local HF working frequencies are normal as compared to monthly average predicted values.

Daily Sun: 30 November 2018

There are no active regions on the Sun as the Sun is currently spotless.

At the moment, 03 CH are detected on the solar disk.

2-Day Conditions

Solar activity is expected to remain at very low levels over the weekend. Quiet to unsettled geomagnetic conditions are expected over the weekend due to the effect of a large recurrent positive polarity coronal hole. Normal HF conditions are expected over the weekend.

ANNEXURE

DEFINITIONS OF TERMINOLOGIES USED IN THIS SUMMARY	
foF2	Maximum frequency of F2-layer of the ionosphere
h'F2	Virtual height of the F2-layer
MUF	Maximum usable frequency for 3000 km
K-index	Local index defining geomagnetic conditions
Declination	Planetary A index defining geomagnetic conditions, predicted value during geomagnetic unsettled conditions
F	Magnitude of the total geomagnetic field vector (unit in nano Teslas)
SON, difference	Sonmiani Geomagnetic Observatory mean value, <u>difference limit</u> from night time value of quiet conditions: 25-30 nT, max: 260 nT
ISP	Islamabad Geomagnetic Observatory mean value
SN	Relative sunspot numbers
V _{sw}	Solar Wind Speed (km/s)
F10.7	Solar radio flux at 2.8 GHz (10.7 cm wavelength)
sfu	Solar flux unit (defines the solar radio 10.7 cm flux)
Solar Flare	Could be B, C, M and X depending upon the intensity of x-rays being emitted (each type has further 10 classes based on amount of energy released by the flare)
IMF	Interplanetary magnetic field (the source of which is the Sun)
B _t	Total IMF (unit in nano Teslas)
B _z	Vertical component of IMF (could be north/upward/positive or south/downward/negative) (unit in nano Teslas)
AR	Active Regions on the sun currently in view
CME	Coronal Mass Ejection
CH	Coronal Hole
KASI	Korean Astronomy & Space Science Institute
SWFs	Short-wave fadeouts, caused by M/X class flares on the daylit side of the hemisphere absorbing lower frequencies and hampering HF communication.
SSN-predicted	Smooth Sunspot Number-it is an estimated value using a mathematical relation to forecast it.
