Solar conditions are at <u>very low</u> levels with background X-ray flux at A-class levels. Local HF working frequencies are <u>normal</u> as compared to monthly average predicted values.																								
Daily Sun: 11 September 2020																								

There are no active regions on the Sun as the Sun is currently spotless.

03 Coronal Holes (CHs) are detected on the solar disk.

2-Day Conditions

Solar activity is expected to remain at low levels over the weekend. The solar wind speed is expected to remain near its background levels over 11-13 September. Global geomagnetic conditions are expected to be mostly quiet during the next two days. It is advised to use the frequency ranges mentioned in the ionospheric section.
