Daily Sun: 9 March 2022

AR 2960 has 55%, 9% and 3% chances to produce C, M and X-class strong solar flares respectively.

No Coronal Holes (CHs) are detected on the solar disk.

DISCUSSION:

Solar activity is expected to be very low with a slight chance of M-class flares. Moderate to low solar wind speed and quiet to unsettled geomagnetic activity is expected due to waning CH HSS influence. Local HF conditions are normal.
