Solar conditions are at low to moderate levels with background X-ray flux at B-class levels.								

Daily Sun: 22 July 2022		
There is no active region present on the solar limb capable of producing strong solar flares. 02 Coronal Holes (CHs) are detected on the solar disk.		2-Day Conditions		
Solar activity is expected to be at low to moderate levels with background X-ray flux at B-class levels. Elevated solar wind speed may be prevailed over the weekend. Quiet to unsettled geomagnetic conditions are expected over the weekend. Normal MUF conditions are expected for the next 2 days. Minor radio blackouts may be observed. It is advised to use the frequency ranges mentioned in the ionospheric section.
