## Daily Sun: 2 September 2022

There is one active region AR3089 present on the Sun capable of producing strong C and M-class solar flares having chances of 66% and 15% respectively.

02 Coronal Holes (CHs) are detected on the solar limb.

## 2-Day Conditions

Solar activity is expected to be at low to moderate levels with background X-ray flux at B-class levels. In case of solar flares, short wave fadeouts and radio blackouts may occur.

Low solar wind speed and quiet geomagnetic activity is expected over the weekend.

Normal HF conditions are expected for the next 2 days. It is advised to use the frequency ranges mentioned in the ionospheric section.
