Solar conditions are at low levels with background X-ray flux at B-class levels.								

## Daily Sun: 9 September 2022

There is no active region on the Sun capable of producing strong solar flares.

02 Coronal Holes (CHs) are detected on the solar limb.

## 2-Day Conditions

Solar activity is expected to be at very low levels with background X-ray flux at C-class levels. In case of solar flares, short wave fadeouts and radio blackouts may occur.

Low to moderate solar wind speed and quiet to unsettled geomagnetic activity is expected over the weekend due to the waning effects of CH HSS.

Normal HF conditions are expected for the next 2 days. It is advised to use the frequency ranges mentioned in the ionospheric section.
