Daily Sun: 10 March 2023		

There are two active regions AR3242 and AR3245 present on the Sun capable of producing strong C and M-class solar flares having chances of 59% and 7% respectively.

01 Coronal Hole (CH) is detected on the solar disk.

2-Day Conditions		

Solar activity is expected to be at low to moderate levels. In case of solar flares, short wave fadeouts may be observed.
Light to moderate solar windspeed and quiet geomagnetic activity is expected over the weekend.
Slightly enhanced ionospheric conditions are expected for the next 2 days. It is advised to use the frequency ranges mentioned in the ionospheric section.
