Daily Sun: 11 April 2023

There is one active region AR3272 present on the Sun capable of producing strong C and M-class solar flares having chances of 65% and 12% respectively.

01 Coronal Hole (CH) is detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at low levels. In case of solar flares, shortwave fadeouts may be observed. Slightly elevated solar wind speed and quiet geomagnetic activity is expected. HF conditions are enhanced.
