Daily Sun: 23 May 2023

There is one active region AR3311 present on the Sun capable of producing strong M and X-class solar flares having chances of 29% and 7% respectively.

01 Coronal Hole (CH) is detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at moderate levels. In case of solar flares, shortwave fadeouts may be observed. Moderate solar wind speed is expected due to the presence of coronal hole. Geomagnetic activity is expected to be quiet. HF conditions are normal.
