Daily Sun: 3 July 2023

There is one active region AR3354 present on the Sun capable of producing strong M and X-class solar flares having chances of 31% and 2% respectively.

03 Coronal Holes (CHs) are detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at low to moderate levels. In case of solar flares, shortwave fadeouts may be observed. Low to moderate solar wind speed is expected due to the presence of coronal holes. Geomagnetic activity is expected to be quiet. HF conditions are normal.
