## Daily Sun: 30 November 2023

There is one active region AR3500 present on the Sun capable of producing strong C and M-class solar flares having chances of 68% and 7% respectively.

01 Coronal Hole (CH) is detected on the solar disk.

### DISCUSSION:

Solar activity is expected to be at low to moderate levels. In case of solar flares, shortwave fadeouts may be observed. Low to moderate solar wind speed and quiet to unsettled geomagnetic activity is expected. HF conditions are normal.
