Daily Sun: 6 February 2024

There are two active regions AR3575 and AR3576 present on the Sun capable of producing strong M and X-class solar flares having chances of 35% and 4% respectively.

No Coronal Hole (CH) is detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at low to moderate levels. Multiple M-class flares have already occurred from the region mentioned. In case of more M/X-class solar flares, minor to moderate radio blackouts may be observed. Low to moderate solar wind speed and quiet geomagnetic activity is expected. HF conditions are normal.
