Daily Sun: 30 January 2024

There is one active region AR3559 present on the Sun capable of producing strong M and X-class solar flares having chances of 60% and 1% respectively.

03 Coronal Holes (CHs) are detected on the solar disk.

## **DISCUSSION:**

Solar activity is expected to be at low to moderate levels. Multiple M-class flares have already occurred from the region mentioned. In case of more M/X-class solar flares, minor to moderate radio blackouts may be observed. Moderate to slightly elevated solar wind speed and quiet to unsettled geomagnetic activity is expected. HF conditions are normal.
