Daily Sun: 23 April 2024

There are three active regions AR3639, AR3645 and AR3647 present on the Sun capable of producing strong M and X-class solar flares having chances of 29% and 4% respectively.

04 Coronal Holes (CHs) are detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at moderate to high levels. Multiple M-class solar flares, have already occurred from the regions mentioned. In case of more M/X-class solar flares, minor to moderate radio blackouts may be observed. Low solar wind speed and quiet geomagnetic activity is expected. HF conditions are normal.
