## Daily Sun: 26 June 2024

There are two active regions AR3720 and AR3723 present on the Sun capable of producing strong M and X-class solar flares having chances of 22% and 2% respectively.

No Coronal Hole (CH) is detected on the solar disk.

### DISCUSSION:

Solar activity is expected to be at low to moderate levels. Few M-class solar flares, have already occurred from the region mentioned above. In case of more M/X-class solar flares, minor to moderate radio blackouts may be observed. Low solar wind speed and quiet geomagnetic activity is expected to prevail. HF conditions are normal.
