Daily Sun: 15 July 2024

There is one active region AR3738 present on the Sun capable of producing strong C and M-class solar flares having chances of 89% and 29% respectively.

01 Coronal Hole (CH) is detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at low to moderate levels. Multiple M/X-class solar flares, have already occurred from the regions mentioned above. In case of more M/X-class solar flares, minor to moderate radio blackouts may be observed. Low to moderate solar wind speed and quiet geomagnetic activity is expected. HF conditions are normal.
