Daily Sun: 14 March 2025 Detected Sunspot Groups Detected Coronal Holes at 2025 Mar 14 0200 SDO AIA 193 at 025 Mar 14 01:57:00 UTC) C-Flare : 78 (% M-Flare : 17 (% X-Flare : 0 (% There are two active regions AR4019 and AR4021 present on the Sun capable of producing strong C and M-class solar flares having chances of 78% and 17% respectively. 02 Coronal Holes (CHs) are detected on the solar disk. Wolf Number : 129 SRS Issue Date - 2025 Mar 14 0030 UTC **2-Day Conditions** Solar activity is expected to be at low to moderate levels. In case of M/X-class solar flares, minor to moderate level radio blackouts are expected.

- Low to moderate solar wind speed is expected due to the presence of coronal hole.
- Geomagnetic activity is expected to be at quiet to unsettled levels.
- Normal ionospheric conditions are expected for the next 2 days. It is advised to use the frequency ranges mentioned in the ionospheric section.
