LATEST SOLAR CONDITIONS

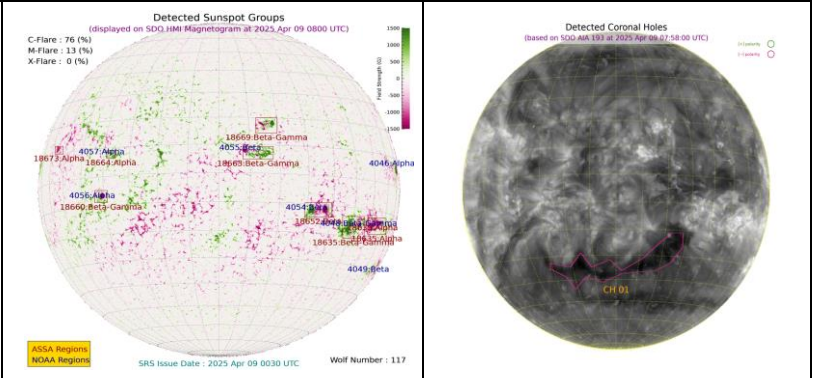

Sunspot Number (SN)	130
Solar radio flux (F10.7)	159 sfu
Solar wind speed	504.5 km/s (varied in the past 24 hrs between 439 & 612 km/s)
Solar x-ray flares	C1.7 (max flare in the past 24 hrs (M1, 2222 UT)
Interplanetary Magnetic Field (IMF) Total Field (Bt) Z Component of Field (Bz)	+9.19 nT (varied in the past 12 hrs between +7.26 nT & +9.42 nT) -3.95 nT (varied in the past 12 hrs between -4.38 nT & +3.93 nT)

Solar conditions are at low levels with background X-ray flux at C-class level.

Daily Sun: 9 April 2025

There is one active region AR4048 present on the Sun capable of producing strong C and M-class solar flares having chances of 76% and 13% respectively.

01 Coronal Hole (CH) is detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at low levels. In case of M/X-class solar flares, minor level radio blackouts may be observed. Low to moderate solar wind speed is expected to prevail due to the presence of coronal hole. Geomagnetic activity is expected to be at quiet to unsettled levels. HF conditions are normal.
