Solar conditi	ons are at lov	w to moderate	e levels with ba	ckground X-ray	flux at B-class l	evel.				

There is one active region AR4098 present on the Sun capable of producing strong M and X-class solar flares having chances of 11% and 1% respectively.

02 Coronal Holes (CHs) are detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at low to moderate levels. In case of M/X-class solar flares, minor levels radio blackouts may be observed. Low to moderate solar wind is expected to prevail due to the presence of coronal holes. Geomagnetic activity is expected to be at quiet to unsettled levels. HF conditions are normal.
