at low to moderate levels with background X-ray flux at B-class level. conditions are

There is no active region present on the Sun capable of producing strong solar flares.

02 Coronal Holes (CHs) are detected on the solar disk.

## **DISCUSSION:**

Solar activity is expected to be at low to moderate levels. In case of M/X-class solar flares, minor to moderate levels radio blackouts may be observed. Low to moderate levels of solar wind speed and quiet levels of geomagnetic activity is expected. HF conditions are normal.
