The local geomagnetic field is quiet at the moment.

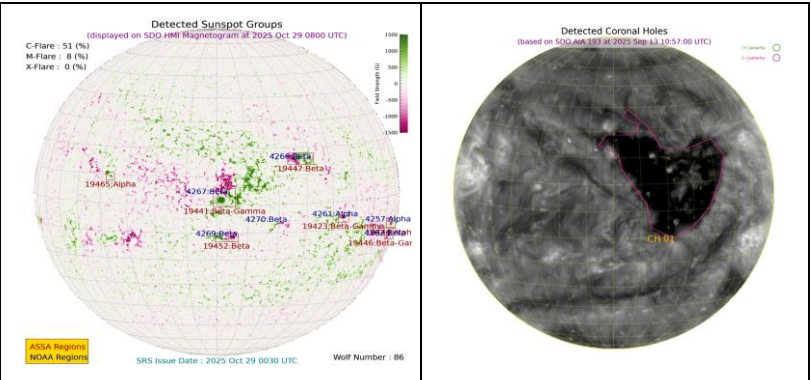

LATEST SOLAR CONDITIONS

Sunspot Number (SN)		91						
Solar radio flux (F10.7)		121 sfu						
Solar wind speed		524.3 km/s (varied in the past 24 hrs between 369 & 519 km/s)						
Solar x-ray flares		B4.8 (max flare in the past 24 hrs (C1, 1626 UT)						
Interplanetary Magnetic Field (IMF) Total Field (Bt) Z Component of Field (Bz)		+10.5 nT (varied in the past 12 hrs between +7.81 nT & +13.45 nT) +7.87 nT (varied in the past 12 hrs between -9.34 nT & +11.31 nT)						

Solar conditions are at low to moderate levels with background X-ray flux at B-class level.

There is no active region present on the Sun capable of producing strong solar flares.

01 Coronal Hole (CH) is detected on the solar disk.

DISCUSSION:

Solar activity is expected to be at low to moderate levels. In case of M/X-class solar flares, minor level HF radio blackouts may be observed. Slightly elevated solar wind speed is expected to prevail due to the effect of coronal hole high speed stream (CHHS). Geomagnetic activity is expected to be at quiet to unsettled levels. HF conditions are normal.
