Daily Sun: 26 December 2025		
There is one active region AR4321 present on the Sun capable of producing strong M and X-class solar flares having chances of 15% and 2% respectively. 02 Coronal Holes (CHs) are detected on the solar disk.		2-Day Conditions		
▪ Solar activity is expected to be at low to moderate levels. ▪ In case of M/X-class solar flares, minor level HF radio blackouts may be observed. ▪ Low to moderate levels of solar wind speed and quiet levels of geomagnetic activity is expected over the weekend. ▪ Normal ionospheric conditions are expected for the next 2 days. It is advised to use the frequency ranges mentioned in the ionospheric section.
