Daily Sun: 9 January 2026

There is one active region AR4336 present on the Sun capable of producing strong M and X-class solar flares having chances of 15% and 3% respectively.

04 Coronal Holes (CHs) are detected on the solar disk.

2-Day Conditions

- Solar activity is expected to be at low to moderate levels.
- In case of M/X-class solar flares, minor to moderate level HF radio blackouts may be observed.
- Moderate to slightly elevated levels of solar wind speed are expected to prevail due to the impact of coronal hole high speed stream (CH HSS).
- Quiet to unsettled levels of geomagnetic activity is expected over the weekend.
- Normal ionospheric conditions are expected for the next 2 days. It is advised to use the frequency ranges mentioned in the ionospheric section.
