## Daily Sun: 20 February 2026

There is no active region present on the Sun capable of producing strong solar flares.

02 Coronal Holes (CHs) are detected on the solar disk.

### 2-Day Conditions

- Solar activity is expected to be at low levels.
- In case of M/X-class solar flares, minor level HF radio blackouts may be observed.
- Low levels of solar wind speed and quiet geomagnetic activity is expected over the weekend.
- Normal ionospheric conditions are expected for the next 2 days. It is advised to use the frequency ranges mentioned in the ionospheric section.
